                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                chain variable region of primate monoclonal antibody anti-human CD23 6G5. The invention provides primate monoclonal antibody anti-human CD23. The invention provides primate monoclonal antibodies which specifically bind human CD23, the low affinity receptor for IgE (FeeRii/CD23), and comprise either of a human gamma-1 or human gamma-3 constant region that binds to human Fc gamma receptors and inhibits IgE expression. The monoclonal antibodies of the invention are claimed to be useful for inhibiting induced IgE production for treating or preventing allergic, inflammatory and autoimmune conditions e.g. allergic rhinitis conjunctivitis, autoimmune hamenlytic anaemia, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9

The invention relates to an isolated polynucleotide (I) encoding a polypeptide (II) comprising a portion of a colon tumour protein. A new colsymbotide (III) that bybridises to (I) is useful for determining the presence of a cancer in a patient. (II) or antigen presenting cells specific for a tumour protein, by contacting T cells of antigen. The specific for a tumour protein, by contacting T cells of antigen presenting cells that express (II) are useful for treating or antigen presenting cells that express (II) are useful for treating or antigen presenting cells that express (II). (II), or antigen presenting cells that express (II) so that T cells proliferate, and administering to the patient and from a patient of the proliferated T cells, thus inhibiting the cancer in the patient. A new composition is useful in development of a cancer in the patient. (I) or (II) is useful in cancer and for the diagnosis in a patient. (I) or (II) is useful in colon cancer and for the diagnosis and monitoring of the cancers. (I), (II) or an antibody against (II) is useful as a probe or primer for nucleic acid hybridisation, and in the design and preparation of ribozyme molecules for inhibiting expression of (II) in tumour calls.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a new isolated nucleic acid termed ovarian specific nucleic acid (OSNA) comprising: (a) a nucleic acid molecule that encodes any of 51 fully defined protein sequences appearing as ABUG1018-ABUG1070 (termed ovarian specific proteins, OSP); (b) any of 76 fully defined nucleotide sequences appearing as ABX92187-ABX92262; or (c) a sequence having at least 60% sequence identity to the nucleic acid molecule of (a) or (b). Also included are a method for determining the presence of an ovary specific nucleic acid (OSNA) in a sample, a vector comprising an OSNA, a host cell comprising the vector, an isolated OSP polypeptide, an anti-OSP antibody or fragment,

                                                                                                                                                                                               The present invention provides the coding and protein sequences for a number of human immune system associated proteins (HISAPS). These can be used in the diagnosis and treatment of various autoimmune disorders, infections and cell proliferation diseases. The diseases include AIDS, adult respiratory distress syndrome, anaemia, asthma, atherosclerosis, crohn's disease, irritable bowel syndrome, multiple sclerosis, myasthenia gravis, osteoarthritis, rheumatoid arthritis, scleroderma, systemic lupus erythematosus, arterlosclerosis, cirrhosis and cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      300

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The sequences given in AAQ35099-100 encode the heavy and light chains of Antibody D respectively. Antibody D is a monoclonal antibody which was derived from peripheral blood lymphocytes from a hepatitis A virus (HAV) sero positive patient. Antibody D is closely related in nature to murine antibody BSB3. Total RNA was isolated from antibody D expressing cells and polyadenylated RNA was extracted. These polyA RNA's were used to prepare a cDNA library which was screened for human kappa light (L) chains and two positive clones were detected. Further heavy (H) chain clones were also isolated. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerse chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques for identifying activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               284 AACCGCTTCTCTGGCTCCAAGTCTGGCAACACGGCCTCCCTGACCGTCTCTGGGCTCCAG 343
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO

The invention discloses a recombinant antibody comprising a constant region of monoclonal antibody (Mab) 57 linked to a non-Mab 57 variable region. Rabies is an acute, neurological disease caused by infection of the creatural nervous system with the rabies virus, a member of the C. Vassavirus genus of the family Rhabdoviridae. Also disclosed are methods for producing an isolated recombinant antibody by culturing a host cell, containing a recombinant expression vector comprising the nucleic acid molecule encoding the antibody, and isolating the recombinant antibody administering to the individual exposed to a pathogen by administering to the individual the recombinant antibodies are useful for preventing (vaccine) and treating an individual cantibodies are useful for preventing (vaccine) and treating an individual the recombinant antibodies are useful for preventing (vaccine) and treating an individual called exposed to a pathogen, e.g. rabies infection. They are also useful for the qualitative and quantitative determination of the rabies virus. The sequences presented are the antibody protein fragments, the nucleic acids encoding them or the PCR primers used to construct the recombinant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        135
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, colyperates chain reaction (FCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques contour contour activity of (II) or to treat disease states involving contour and activity of (II) or to treat disease states involving contour and applying partners are useful in medical captor and properties in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical calsorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in captor diagnostics, forensics, gene mapping, identification of mutations captor general sequences of the invention.

Contour contour contour captor captor captor traits to assess biodiversity and to produce other types of data and products dependent on DNA and captor contour sequences. AAS64197-AAS94564 represent novel human captor data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO captors.

The invention relates to a new modified single chain FV antibody containing at least two Heavy chain variable domains and at least two light chain variable domains from the same or different monoclonal antibodies and which is an agonist for crosslinking a molecule at the cell surface or within the cell and thereby transducing a signal into the mirror and the interpretation of the antibodies by culture of the transformed cells, drug compositions the antibodies by culture of the transformed cells, drug compositions containing the antibodies and an assay method for the agonist activity of the antibodies by contacting the antibodies with cells expressing the relevant cell surface or internal molecule. The antibodies are useful for treatment and prevention of cancer, inflammatory disease, hormonal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               241 AATGGTTCTGTGGCTCCAAGTCTGGCAACACGGCCTCCCTGACCATCTCTGGGCTCCAG 300

                                                          The present sequence is that of patient-specific bicistronic chimeric idlotype VR1642 (plasmid VAXID), which is used to treat B-cell lymphoma patients. The plasmid includes the cytomegalovirus immediate-early promoter, enhancer and 5' untranslated sequences, driving the expression of mouse-human chimeric immunoglobulin light and heavy chain sequences. The human light and heavy chain sequences. The bound cell lymphom cell line RAMOS. The transcriptional terminator region includes polyA and termination signals from the bovine growth hormone gene. According to the invention, co-administration of VR1642 with a plasmid (see AAF30314) encoding human Fms-like tyrosine kinase (Flt-3 ligand) provides a means of treating a patient with B-cell lymphoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Length 7528;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     TGCACTGGAACCAGCGATGACGTTGGTGGTTATAACTATGTCTCCTGGTACCAACACCAC 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TATGTGCTGACTCAGCCACCCTCGGTGTCAGGGTCTCCTGGACAGTCGATCACCATCTCC 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention describes a modified antibody comprising at least 2 heavy chain variable domains and 2 or more light chain variable domains of an antibody, and exhibits thrombopoietin (FPO) agonistic effect by causing the TPO receptor to crosslink. The antibodies are useful in preventives and/or remedies for platelet reduction-associated blood diseases, thrombocytopenia following cancer chemotherapy or leukaemia. The antibody can act as a TPO signal transduction agonist by transducing a signal into cells by crosslinking a TPO receptor to exert TPO agonism. This sequence encodes a thrombopoietin (TPO) agonist antibody associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9

The invention relates to isolated polynucleotide (1) and polypeptide (11) sequences. (1) is useful as hybridisation probes, polypeptide (11) sequences. (1) is useful as hybridisation probes, and sequence to polynucleotides are also used in diagnostics as expressed sequence tags for for identifying expressed genes. (1) is useful in gene therapy techniques to restore normal activity of (11) or to treat disease states involving (11). (11) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (11) and its binding partners are useful in medical inaging of sites expressing (11). (1) and (11) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forenaics, gene mapping, identification of mutations in responsible for genetic disorders or other traits to assess broadersity
